1. Welcome, Introduction

10:00-10:15

Jean Verseille (SIDC TSOs Steering Committee Chairman, Artelys)
Stefano Alaimo (SIDC NEMOs Steering Committee Chairman, GME)

29th April 2021
Ground Rules
Settings for Webcam View

- Screen NOT in “fullscreen mode”
- Click on the icon and select your view
- Suggestion: Select “View presenter”
- Presenters will have the webcams activated
- Webcams of attendees will not be activated
Ground Rules

Microphone settings
- During the presentation all participants are MUTED by the organizer
- When a participant will be given the word, they will be SOFT-UNMUTED by the organizer
- If such a participant is muted on his own computer, she/he will need to unmute themselves in order to be able to speak
- After the question was answered, the participants will be MUTED again by the organizer

Asking Questions
- Please DO NOT USE the “Raise Hand” function
- Please DO NOT TYPE questions in the Q&A Tool
- Please USE the Q&A Tool only for posting an alert that you wish to ask a question by inserting “RH” or “Raise Hand” into the Q&A Tool
- The participants will be given the word in the order they provided their “RH” alert through the Q&A tool
- If any question remains unanswered due to time constraints, the participants can provide the question per email to: Lenka.linke@cz.ey.com ; Subject: 3rd Wave Webinar
2. Key Note Speech

10:15-10:30

Mathilde Lallemand Dupuy (DG Energy, European Commission European Commission)

29th April 2021
SIDC 3\textsuperscript{rd} Wave Go-Live
Pre-Launch Event

29\textsuperscript{th} April 2021

<td>Market opening</td>
</tr>
<tr>
<td>2009</td>
<td>Intraday market</td>
</tr>
<tr>
<td>2011</td>
<td>D Auctions</td>
</tr>
<tr>
<td>2015</td>
<td>SDAC</td>
</tr>
<tr>
<td>2017</td>
<td>New auctions</td>
</tr>
</tbody>
</table>

- Originally conceived to allow market participants to adjust physical positions for large units
- Auctions gradually increased to accommodate RES and load needs
- Eventually, auctions opened for import as pilot project to replicate the benefit of day-ahead auctions in the intraday timeframe
XBID implementation

XBID represents a significant step forward towards the European target model and a full implementation of CACM on Italian bidding zone borders.

Significant change in market participants behaviour
- Trading room open 24/7
- Transaction cost mainly on small operators

Significant change in dispatching approach
- Review the coordination between Intraday and Integrated Scheduling process
Key elements for Italian electricity market

- **Physical market**
  - One needs to have an asset in Italy to be allowed to trade
  - A number of foreign operators are participating in the market
  - Very high liquidity (among the top markets in Europe)

- **Central dispatch**
  - Integrated scheduling process run to dispatch the generation units
  - Strong coordination with intraday market required
Intraday and integrated scheduling process – as is

![Diagram of scheduling process]

- Bids submission
- Auction clearing
- MSD ex-ante (ISP)
- Delivery hours
Intraday and integrated scheduling process – to be

Mercato del giorno prima (MGP)

Mercato Infra-giornaliero (MI)

IDA1
IDA2
IDA3
XBID

MSD

Bids submission
Auction clearing
MSD ex-ante (ISP)
Delivery hours

No longer full coordination between Intraday and MSD

Some reconciliation between ISP and Intraday is needed
Implicit auctions as early IDAs implementation

With XBID go-live

- Italy will abandon the 7 intraday auctions towards continuous trading for flexible adjustments for market participants
- Auctions are kept in order to provide a market value for the cross-border capacity that is a scarce resource
- Italy North CCR chase to align implicit auctions with IDA concept as approved by ACER
  - Same timings
  - Same target suspension for XBID
- Intraday coupling pilot project was a positive and effective tentative for an early and voluntary IDAs implementation
Thank you for the attention!

Office for European Regulation -REU
4. Overview of SIDC – background, history and review of first years of operation

10:40-11:00

Jean Verseille (SIDC TSOs Steering Committee Chairman, Artelys)
Gilbert Guntschnig (SIDC TSOs Project Manager, APG)

29th April 2021
What is SIDC

SIDC (formerly known as the XBID project) objective:

“Establish a common cross border implicit continuous Intraday trading solution across Europe, where all the cross border capacities are allocated...” Quote from Request for Offer (RFO) Issued 2012

SIDC accommodates the continuous matching of orders from market participants in one bidding zone with orders coming from its own bidding zone and from any other bidding zone where cross-zonal capacity is available.

SIDC System – 3 main modules
The Single Intraday Coupling Mechanism defined in CACM

- Shared Order Book (SOB)
- Capacity Management Module (CMM)
- Shipping Module (SM)
Benefits delivered by SIDC

- Cross-border trading opportunity close to real-time across Europe on one platform.

- Enables increased optimisation of generation assets—especially variable RES

- Leads to welfare benefits

- Brings the whole European Intraday continuous market together and complements the Day Ahead market

- One-stop shop for transmission capacity allocation in Intraday

- Capable of delivering a wide product range—15 minutes, 30 minutes, hourly, block products etc.
Delivery of SIDC has, and still, involves 3 areas of distinct focus:

- **Local Implementation Projects (LIPs)**
- **SIDC Common Project (TSOs+NEMOs)**
- **SIDC Solution (NEMOs+Service Provider)**

- **Adjustment of local systems and interfaces**
  - Alignment with SIDC testing and Go-live phase
  - Roadmap and Progress Reporting

- **SIDC design and development**
  - Central implementation & Testing
  - Common framework for pre- & post coupling

- **Project under contract – Managing contractual SIDC framework**
Key SIDC Historical Milestones

Voluntary initiative

- NWE PXs Selecting service provider
- Signature APCA NWE+ PXs & TSOs
- June 2015 Signature Development Contract (DBAG with NWE+ PXs)

2014

- 14.02.17: start CACM cost sharing
- 12.06.18 Entry into force SIDC IDOA → All NEMOs + TSOs in scope of CACM

2015

- August 2015 CACM entry into force

2016

- 14.02.17: start CACM cost sharing
- 12.06.18 Entry into force SIDC IDOA → All NEMOs + TSOs in scope of CACM

2017

- NWE+ TSOs joining cooperation

2018

- NWE PXs Selecting service provider
- Signature APCA NWE+ PXs & TSOs
- June 2015 Signature Development Contract (DBAG with NWE+ PXs)

2019

- Accession stream
- Local Implementation Project 1st wave LIPs
  - Development Phase 04/15-10/16
  - Testing Phase 10/16-03/18
  - Go-live Prep. Phase
- XBID go-live
- Agile Pilot R3.0 09/20-03/21

2020

- Local Implementation Project 2nd wave LIPs
  - R2.0 scoping 03/18-10/18
  - Development 10/18-03/19
  - Testing R2.0 03/19-10/19

2021
Countries coupled Intraday with 1\textsuperscript{st}, 2\textsuperscript{nd}, 3\textsuperscript{rd}, 4\textsuperscript{th} and 5\textsuperscript{th} SIDC Go-Live

- Countries coupled in 1\textsuperscript{st} go-live (June 2018)
- Countries coupled in 2\textsuperscript{nd} go-live (November 2019)
- Country to be coupled in 3\textsuperscript{rd} go-live (Q3/2021)
- Country to be coupled in 4\textsuperscript{th} go-live (Q1 2022)
- Country to be coupled in 5\textsuperscript{th} go-live (Q4 2022)

Note: Luxemburg is part of the Amprion Delivery Area. Market participants in Luxemburg have access to SIDC through the Amprion Delivery Area.
SIDC Operational Key Figures
A growth story

Traded Volume in SIDC

[2\textsuperscript{nd} go-live 19\textsuperscript{th} Nov 2019 ]

Traded volume 2019: 58 TWh

Traded volume 2020: 82 TWh  \(+42\%\)
SIDC Operational Key Figures

A growth story

Average No. daily trades 2019: 64,000
Average No. daily trades 2020: 110,000

Average No. daily order transactions 2019: 708k
Average No. daily order transactions 2020: 1,646k

[ 2nd go-live 19th Nov 2019 ]
5. The SIDC matching solution

11:00-11:30

Vladimír Satek  (SIDC NEMOs' Project Manager, Minsait)

29th April 2021
1. The SIDC matching solution in the context of SIDC project

Overview of SIDC – background, history and review of 1st year

The SIDC matching solution

Overview of borders, market areas & products

Relevant information for market parties from Local Implementation Projects (LIPs)

Member’s trial period, go-live plan and next steps for readiness
2. The SIDC matching solution from MP’s view (1/2)

<table>
<thead>
<tr>
<th>Component</th>
<th>Provided by</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cockpit</td>
<td>LTS</td>
<td>Local Trading Solution (LTS) offers ultimate interface to Market Participants, either via pre-built screens or via automated communication which allows MP’s development of the „cockpit“. <strong>LTS is sole interface to MPs to provide market data</strong> (order, trades, status of the market, status of the products, etc.). <strong>Each LTS has an individual functionalities and individual look &amp; feel.</strong></td>
</tr>
<tr>
<td>Engine</td>
<td>XBID Solution (SIDC matching solution)</td>
<td>Core of the system ensuring matching of the orders in line with predefined and transparent principles including processing of the trades. It is done via utilization of The trading Module (SOB), The Capacity Management Module (CMM) and The Shipping Module (SM)</td>
</tr>
</tbody>
</table>
2. The SIDC matching solution from MP’s view (2/2)

To get familiar with your LTS you need to contact your respective NEMO(s).

- It is important to note that XBID Solution provides relevant information to LTS at the same time and in the unique form, which ensures transparency and equal treatment on the SIDC.
- Content of the information differs based on the market areas reflecting e.g. available capacities.
- It is responsibility of each NEMO how the information is presented to the market participants.

Note 1: The XBID Solution provides capacities to all LTSs in the form of Hub-To-Hub matrix (H2H). LTSs process the H2H matrix and provide this information further to Implicit Market Participants. The presentation form of H2H matrix is specific per each LTS.

Note 2: The XBID Solution provides matching services (SOB) to LTSs. Each NEMO has a right to offer local matching services by LTS’ specific functionalities, products and services or by any other means. This may also relate to the cases in which LTS provides extended trading period outside of the XBID Solution and therefore the approach may differ per NEMO/LTS.
3. The SIDC matching solution – XBID Solution

The XBID Solution is a trading solution designed to enable power exchanges to trade energy contracts seamlessly across different geographies in a transparent, efficient. It aims at creating an integrated matching platform based on the shared order book concept of trading module (SOB), the Capacity Management Module (CMM) and the Shipping Module (SM). The combined entity allows multiple exchanges in different geographies to trade cross border energy contracts continuously on a 24 by 7 basis on a centralised platform.

The trading Module (SOB) is a commodity trading system catering to the requirements of the energy markets. The trading system is designed to offer trading services to the members continuously. It supports a wide range of energy products and contract types.

The Capacity Management Module (CMM) refers to a capacity allocation module which offers the ability to allocate cross border capacity to users continuously. CMM offers both explicit (standalone capacity requests by user entities) as well as implicit (triggered by trades generated in SOB) allocation.

The Shipping Module (SM) of the XBID Solution provides information from trades concluded within XBID to all relevant parties of the post-coupling process. The SM receives data from the SOB about all trades concluded:
1. Between two different Delivery Areas (DA)
2. In the same DA between two different Exchange Members

The data from the SOB and the CMM are enhanced with relevant TSO, CCP and Shipping Agent data from the SM and transferred to the parties at the configured moments.
3. The SIDC matching solution – High Level Architecture

(*) XB nominations could be also needed in areas where nomination behalf is not applicable

(**) According to local procedures (direct or indirect nominations)
3. The SIDC matching solution – Architecture

SOB
- Matching: Order Execution
- Capacity Routing: Calculation of the Local Views of Order Books
- Interface to Local Trading Systems: Offers access to XBID to LTS
- Order Book: Calculation of the Local Views of Order Books

Common Reference Data Module
- Maintain reference data required for the XBID Solution.
- Central access point for reference data required to operate XBID Solution.

Reporting Engine
- Generate and distribute reports.
- Runs independently from SOB and CMM modules.
- Flexible report generation schedules.

Explicit Market Participants have a direct technical access to the XBID Solution in order to perform explicit allocations on the German-French and Croatian-Slovenian borders.
3. The SIDC matching solution – CMM. Market Area / Delivery Area

**Market Area**
- Represents a *price area* in the delivery grid
- Can contain **one or more** Delivery Areas
- Transport capacity between Market Areas is **subject to congestion**

**Delivery Area**
- Represents an area in the delivery grid which is **managed by one TSO**
- **Order entry is into a Delivery Area** (from which a bought commodity is received, or to which a sold commodity is delivered)
3. The SIDC matching solution – CMM. Interconnectors and borders

Separate Configuration per Interconnector
- Opening and Closing Time,
- Capacity Resolution,
- Default Capacity,
- Ramping,
- Validity, etc

Common Configuration per Border
- Common ATC,
- Leading TSO,
- Validity, etc

Interconnector
A connection between two Delivery Areas.

Border
A connection between two Market Areas.
3. The SIDC matching solution – products, contracts, trading schedule

**Product**
- Represents one unique set of trading features (e.g. hourly product, an hour)
- Defines the guidelines for generating the underlying contracts
- Products are made available for trading per delivery area, thus each delivery area can have a separate set of tradable contracts.

**Contract**
- An instance of a Product in time, an actual tradable instrument (e.g. the hour 11h-12h on 25 November 2017)
- With a predefined time of delivery
- Used by the trading member entities to enter into agreement to sell/buy a certain quantity
- Each product will have multiple contracts and each contract will belong to one and only one product.

**Trading Schedule**
- Defines when a contract opens and closes for trading
- Each delivery area will be assigned to some specific schedule (pre-defined).
3. The SIDC matching solution – Contract Life Cycle

<table>
<thead>
<tr>
<th>Contract</th>

</tr>
</tbody>
</table>

- **Contract Activation Point**: This refers to the point of time that marks the beginning point of trading for the contract.
- **Contract Expiry point**: This refers to the point in time when the contract expires or is no longer allowed to trade.
- **Trading Period**: Time interval where orders can be submitted.
- **Start of Delivery**: This is the point in time when the contract delivery starts.
- **End of Delivery**: This is the point in time when the contract delivery ends.
- **Delivery Duration**: This refers to the time duration over which the commodity is delivered.
3. The SIDC matching solution – SOB

**SOB**
- Enters orders coming from LTS into a **public order book**
- **Matches orders** against the most suitable counter-orders (following price-time-capacity priority criteria)
- Initiates implicit **capacity allocation**

**Price-time-capacity priority criteria**
- **Price:** Orders are always executed at the best price
- **Time:** A timestamp (assigned at entry into SOB) is used to prioritize orders with the same price limit (earlier means higher priority)
- **Capacity:** Capacity should be available to make order execution possible

**Order Book Views**
- The SOB maintains a single **consolidated order book** for all orders that are entered for a contract
- CMM maintains two ATC values, one for each direction in that power could flow. Based on these two values the SOB module can calculate a customised **local view** for each contract and delivery area, which contains all the executable orders for the concerned area.
3. The SIDC matching solution – Order Processing

Calculation of the local view of an order book is based on the following factors:
- The available transmission capacity.
- Orders entered for the contract.

1. New order entered
2-A. Trading Solution anonymized the order and forward to SOB
2-B. Update available capacity.

SOB validates if any orders in the local view of the order book can match and calculate the Local View for each DA

3. SOB send the result of order entry to trading solution
4. Local view of the updated order book is published via the PMI to the Trading Solution

5. Trading Solution publish new local view
3. The SIDC matching solution – Order Book

Order Book Calculation

- Local views will be enriched with cross-border orders if sufficient transmission capacity is available.
- The same order can be displayed in multiple local views (depending on available transmission capacity).
- Cross-border orders in the local views will be displayed up to the available capacity; hence orders can be shown with partial volume.
- An order is removed from all local views after full execution, deactivation or deletion.

Rules for Order Book Calculation

- Orders from other markets are selected based on available capacity and price-time-priority.
- Iceberg orders are displayed with their visible quantity and not with their total quantity.
- AON orders can only be displayed with full quantity.

Traders cannot see in which area the orders that they see in their local order book were entered.
3. The SIDC matching solution – Shipping Module

- Shipping is the process of **transferring energy between CCPs** within and across the delivery areas including the financial clearing. By definition, shipping does not apply to explicitly allocated capacities.

- **Physical shipping** is the process to transfer energy between CCPs by way of nomination, without the financial clearing for the change of energy ownership.

- **Financial shipping** is the process of financial clearing for the change of ownership of the transferred energy between CCPs.
### 4. The SIDC matching solution – Performance

<table>
<thead>
<tr>
<th>Performance development stage</th>
<th>Peak length - as the current production peak length is exceeded in some cases</th>
<th>Peak load - as the current production value is close to or even exceeding defined boundary</th>
<th>Overall load and topology – uplift for 2nd Wave and to give some headroom</th>
<th>Relaxation of Order Book limit - (increase # of Orders in Local View)</th>
</tr>
</thead>
<tbody>
<tr>
<td>RTS3 Slice B - required capacity of the XBID Solution since 2nd Business Go-Live</td>
<td><strong>10 seconds</strong></td>
<td><strong>15%</strong> Daily maximum of Order transactions in peak; sustainable load threshold <strong>40</strong> order transactions per second</td>
<td><strong>52</strong> Hubs, <strong>82</strong> Interconnectors <strong>1,500,000</strong> Order transactions per day</td>
<td><strong>100</strong> orders in the Local View update</td>
</tr>
<tr>

- **Allocation process suspended (capacity not available)**

**Offered Capacity (OC)**

- **Left-over capacity from DA process** (it could be reduced for security issues)
- **Available capacity based on IDCC1** (when implemented)
- **Available capacity based on IDCC2**

**Notes:**
- XBID and CRIDA: a hybrid model for capacity allocation.
5. XBID and CRIDA: a hybrid model for capacity allocation

Offered Capacity on North Italian borders available after 22:00 D-1

- **ITALY - FRANCE**: XBID, CRIDA
- **ITALY - AUSTRIA**: XBID, CRIDA
- **ITALY - SLOVENIA**: XBID, CRIDA
- **ITALY - SWITZERLAND**: Exp. Auct.
- **ITALY - GREECE**: XBID*, CRIDA
- **ITALY – INT. BORDERS**: XBID, CRIDA

**Available Capacity**

- **BASED ON IDCC1 (WHEN IMPLEMENTED)**
- **BASED ON IDCC2**

**Left-Over Capacity**

- From DA process (it could be reduced for security issues)

**Available Capacity**

- Offered Capacity: 1, 2

* GR-IT border not part of the XBID 3rd go-live wave

Allocation process ongoing with available capacity

Allocation process not implemented

Allocation process suspended (capacity not available)
5. XBID and CRIDA: a hybrid model for capacity allocation

- **ITALY - FRANCE**
  - XBID
  - CRIDA

- **ITALY - AUSTRIA**
  - XBID
  - CRIDA

- **ITALY - SLOVENIA**
  - XBID
  - CRIDA

- **ITALY – SWITZERLAND**
  - Not part of LIP14

- **ITALY - GREECE**
  - XBID
  - CRIDA

- **ITALY – INT. BORDERS**
  - XBID
  - CRIDA

- **OFFERED CAPACITY (OC)**

- **D-1**
  - 14:40
  - 15:00
  - 15:30
  - 21:40
  - 22:00
  - 22:30

- **D**
  - 9:40
  - 10:00
  - 10:30
  - 22:00

- **22:00**

*GR-IT border not part of the XBID 3rd go-live wave*

- **Allocation process ongoing with available capacity**
- **Allocation process not implemented**
- **Allocation process suspended (capacity not available)**

- **XB allocation NOT interrupted in XBID during CRIDA operation**
- **XB allocation interrupted in XBID during CRIDA operation**
- **Continuous trading in XBID interrupted across and within Italian bidding zones during CRIDA operation**

- **LEFT-OVER CAPACITY FROM DA PROCESS (IT COULD BE REDUCED FOR SECURITY ISSUES)**

- **AVAILABLE CAPACITY BASED ON IDCC1 (WHEN IMPLEMENTED)**

- **AVAILABLE CAPACITY BASED ON IDCC2**
6. Products offered in the XBID solution
A. Overview

• XBID system supports the following products:
  – 15-minutes
  – 30-minutes
  – 60-minutes
  – Hourly User Defined Blocks
• Products are configured to the XBID solution per market area
• For specific product availability in different market areas see next slide
6. Products offered in the XBID solution

As of 22.09.2021

- Implicit Continuous + 3 Implicit Auctions (CRIDAs)
- Implicit Continuous
- 3 Implicit auctions (CRIDAs)
- 2 Explicit auctions (not part of LIP 14)
Coordination between SIDC and Italian Ancillary Service Market (1/2)

• Terna applies a **central-dispatch model** procuring most of the ancillary service resources through an **integrated scheduling process (MSD)** after the day-ahead market based on several sessions.

• In the **current approach**, the last session of **MSD** runs after the gate closure of the intraday process **when the energy market is closed**.

• The introduction of the continuous intraday process with gate closure 60' before delivery changes completely the MSD approach and the **MSD session will have to run in parallel with the intraday continuous process**.

• **Central-dispatch model** is currently transposed in **Italian spot markets** across all timeframes, **by allowing “unit-specific” trading. Portfolio bidding** shall be supported as well by GME and Terna on **intraday continuous trading (XBID)**, to accommodate **more flexible trading mechanism**, thus requiring the introduction of a **Nomination process** for Italian BRPs.

**Coordination between MSD and SIDC is required**

• **Nomination** of the energy negotiated portfolio based is required before each MSD session and after IDCZGCT.

• Nominations of the units participating to MSD shall respect the **Feasibility Range** set by Terna in the MSD sessions.

• Difference between the balance of the portfolio in the energy market and the nominations is subject to **Imbalance price** (single imbalance price of the not enabled units).

Trading on SIDC for Italian Parties (1/2)

- Both **portfolio** and **unit specific bidding** is **allowed** on GME Local Trading Systems connected to XBID.
- Each GME’s **market participant** in each **bidding zone** is assigned 1 **portfolio** with **all units @zonal price** (UP/UPV/UCV/UPM) in its availability (Dispatching User or delegation).
- **Market participant** can **choose** whether to refer each offer to the **portfolio** (= indiscriminately to all units) or to the individual **unit @ zonal price**.
- The **units @ PUN** (UC) are **not part** of the **portfolio** (only unit-specific bidding allowed).
- **Trading limit** for sale and purchase in case of **unit-specific bidding**: = upward and downward margins of each unit.
- **Trading limit** for sale and purchase in case of **portfolio bidding**: = Σ upward and downward margins of all units of the portfolio.
- In defining upward/downward margins, **feasibility range** imposed by Terna are taken into consideration for unit participating to ancillary service market.
Trading on SIDC for Italian Parties (2/2)

- Trades of each market participant on GME’s LTS (both unit and portfolio), determine in each hour $h$ a “zonal” commercial position (portfolio balance) for
  - every portfolio: $\Sigma$ buy (+) and sell (-) offers referring both to the portfolio and to the units @zonal price from the same zone;
  - every units @ PUN (UC): $\Sigma$ buy (+) and sell (-) offers
- The “zonal” portfolio balance accrued for each hour $h$ must be «scheduled» (attributed to the corresponding units)
- Trading on GME’s LTS via unit specific bidding corresponds to an “implicit” nomination
  → Market participants do not need to perform any nomination process, since trade accepted on each unit are automatically translated by GME into injection/withdrawal schedule
- Trading on GME’s LTS via portfolio bidding requires an “explicit” nomination to be performed
  → Market participants need to perform an explicit nomination process on GME’s Piattaforma di Nomina - PN (Scheduling Platform) by h-57’ in order not to incur in any imbalance
  → The schedules “explicitly” nominated are verified as being congruous with respect to the corresponding commercial position of the portfolio to which they refer (unit @ zonal price) and the margins (feasibility intervals) of the units
- On each zonal Portfolio, for each hour $h$, market participants may incur an imbalance equal to:
  $\Sigma$ purchase (+) and sale (-) offers (portfolio balance)
  +
  $\Sigma$ withdrawal (-) and injection (+) schedules (both implicitly and explicitly nominated)

8. Member’s trial period, go-live plan and next steps for readiness

13:35-13:55

Mario Pession (GME)
Rosario Franzone (Terna)

29th April 2021
1. Market Trial (1)

What is the Market Trial?

• The Market Trial Period gives the Market Participant the opportunity to connect via Local Trading Systems (LTS) of the NEMOs to the SIDC system and to perform the CRIDA auctions (Slovenia, Italian and Greek regional auctions)

• Isolated tests with Italian participants on both platforms were already performed in previous weeks.

• The Market Trial Period is locally organized by individual NEMOs/TSOs – NEMOs and TSOs (for Explicit Market Participants, but these are not present in borders belonging to LIP14) are the main communication interface for both technical and organizational matters – connectivity details and credentials will be communicated locally

• Mainly focused on the new Market Participants, but all market participants are invited and encouraged to join

• The Market Trial will be conducted in production-like conditions, meaning that following items are configured in accordance with the foreseen go-live configuration:
  – product range
  – product naming and product scheduling
  – cross-border capacities availability times
  – coupling perimeter.
1. Market Trial (2)

- **Goal:** to become familiar:
  - With **SIDC functionalities and process** – applicable for the Market Participants who are not using SIDC services yet
  - With the CRIDA process
  - With the new Italian market processes (integration between energy market and ancillary service market)
  - **Post-coupling activities like nominations are out of scope** of the Market Trial.

- **Period of execution:**
  - 1<sup>st</sup> timeslot: 21/06/2021 - 25/06/2021
  - 2<sup>nd</sup> timeslot: 28/06/2021 - 02/07/2021
  - 3<sup>rd</sup> timeslot: 05/07/2021 – 09/07/2021 (mandatory for TERNA and GME)
  - 4<sup>th</sup> timeslot: 06/09/2021 - 10/09/2021 (contingency week)
    - Note: **Activation of the 4<sup>th</sup> timeslot is subject to LIP14 approval.**
    - Participation of Italian NEMO and TSO is mandatory for 3<sup>rd</sup> timeslot of the Market Trial Period, but it may be open to other parties as well.
1. Market Trial (3)

- **Operating times:**
  - The IT System will be operating on a 24x5 basis during the Trial Period.
  - The support services (operational and technical consultation, simulation of the predefined scenarios) will be provided between 9am and 5pm CET by NEMOs for Implicit Market Participants.
  - All requests for support or consultation outside of the supported times are the responsibility of each of the NEMOs.

- **Technical arrangements:**
  - Implicit Market Participants – are fully the responsibility of each NEMO
  - Explicit Market Participants (not part of LIP 14) – are within the responsibility of the respective TSOs – connectivity data distribution, connectivity tests, manuals for Explicit MPs, …

- **Operational Messages:**
  - The purpose of the Trial Period is to simulate operation as close as possible to the standard production operation. This implies that the systems will generate operational messages. The Market Participants shall be advised to distinguish between messages coming from the Trial Period and those coming from routine operations.
1. Market Trial (4)

Timing for CRIDAs:

CRIDA1: date: D-1

gate closure time 15.00 – results and reopening of continuous trading 15.30 (production timing)

CRIDA2: date D-1

gate closure time 16.30 – results and reopening of continuous trading 17.00

(on the 3rd slot production timing is used: gate closure at 22.00 – results and reopening of continuous trading at 22.30)

CRIDA3: date D

gate closure time 10.00 – results and reopening of continuous trading 10.30 (production timing)
1. Market Trial (5)

Detailed Schedule*:

• 1\textsuperscript{st} Timeslot, week: 21/06/2021 - 25/06/2021
  – Mo 21.06.2021 Normal operations (XBID and CRIDAs 1 and 2)
  – Tu 22.06.2021 XBID Closing/Reopening of Italian market + CRIDAs
  – We 23.06.2021 XBID Closing of several market(s) + CRIDAs
  – Th 24.06.2021 XBID Closing of Italy-French border + CRIDAs + CRIDA2 cancellation
  – Fr 25.06.2021 XBID unavailability + only CRIDA3

• 2\textsuperscript{nd} Timeslot, week: 28/06/2021 - 02/07/2021
  – Mo 28.06.2021 Normal operations (XBID and CRIDAs 1 and 2)
  – Tu 29.06.2021 No testing planned (bank-holiday in Rome)
  – We 30.06.2021 Normal operations (XBID+CRIDA)
  – Th 01.07.2021 Normal operations (XBID+CRIDA)
  – Fr 02.07.2021 Normal operations (XBID + only CRIDA3)

* Test scenario could be subject to revision
1. Market Trial (6)

Detailed Schedule:

• **3rd Timeslot, week:** 05/07/2021 – 09/07/2021 (mandatory for TERNA and GME)
  - for Italian market participants
  - Normal Operation
  - Italian Ancillary Service Market tests

• **4th Timeslot, week:** 06/09/2021 - 10/09/2021 (contingency week)
  - Reserved for additional Trial Period testing if activated by the SIDC project
  - **Normal operations** = testing against production-like products
  - **Closing of market(s)/borders** = simulations of situations where specific messages will be communicated, specific local NEMO processes in local trading systems might be proposed
Go-live is expected to be 21/09 for flow date 22/09
9. Future plan for SIDC

13:55 - 14:15

Gilbert Guntschnig (SIDC TSOs Project Manager, APG)

29th April 2021
SIDC- Future Roadmap

- SIDC has achieved major milestones with the 1\textsuperscript{st} and 2\textsuperscript{nd} wave go-lives, the forthcoming 3\textsuperscript{rd} wave go-live will be an essential step to complete the Single European Intraday Market.

- SIDC now enters into a new phase in which its focus will be increasingly directed towards research and development of complex new functionalities, which will deliver further important benefits to the market, such as
  - Cross-product matching
  - Intraday Auctions
  - Flow-based continuous allocation
  - Losses on HVDC lines
  - Enduring shipping solution
  - Maintaining the performance

- In parallel, additional changes will be analysed and implemented with the aim to improve the system usability for SIDC operations and to roll-out existing functionality across Europe.
This roadmap illustrates the project’s best estimate based on the experience gained.
- Chevrons show central development and testing activities, design phases are not depicted.
- For the functionalities shown in light grey the start time of development remains unclear.

Development and testing of releases cannot be done in parallel thus dependencies between major deliverables needs to be foreseen.
- Testing a new release takes 6 months+, this means that there can be no more than one major release p.a.

The scoping of future releases is still to be decided. This could result in the merging of some of the above deliverables into one bigger release in case this turns out to be feasible.
Enables matching between
• 15-min and 60-min products, 30-min and 60-min products, 15-min and 30-min products and
• any combination of the mentioned products, for example two 15-min and one 30-min product against one 60-min product.

Design of central system changes is almost finalised. This phase will be followed by system development, which is expected to start in Q2 2021. Securing the performance will be one of the main challenges on the way to implementing CPM.

Once the technical design is agreed, SIDC will organize a webinar for market participants to explain the impact on SIDC trading in detail and to prepare for the upcoming change.
SIDC Roadmap 2021-2025

Intraday Auctions (IDAs)

- Three implicit intraday coupled auctions (15:00 D-1, 22:00 D-1 and 10:00 D) will be implemented per delivery day. This will enable the pricing of transmission capacity in the intraday timeframe as provided for in the CACM regulation.

- For efficiency reasons the infrastructure used for the auctions in day ahead (SDAC) will be reused for the operation of the IDAs.

- High level design has been finalised. SIDC aims to decide on how the interface between SIDC and the day ahead infrastructure will be designed in the coming weeks.

- Once this decision is taken, the changes to be implemented both in the intraday (SIDC) as well as in the day ahead (SDAC) infrastructure will be elaborated in detail.

- The system development in SIDC could theoretically start three months after the decision on the interface is taken.
SIDC Geographical Extension

- The extension of the coupled Intraday region remains an SIDC priority.

- Contrary to previous releases the dependency between major SIDC releases and geographical extensions is no longer a limiting factor, i.e. additional countries will be integrated into SIDC as soon as their local developments are ready and go-live preparations are carried out.

- Plans for the integration of the 4th wave borders are already made.

Future Governance

• SIDC is currently setting up a joint governance structure with SDAC.

• The cornerstone of the joint governance is the merging of the steering bodies of SDAC and SIDC to the so-called **Market Coupling Steering Committee**.
  – This will allow decision-making beyond the individual projects for topics that affect both SDAC as well as SIDC (e.g. Intraday Auctions which are under SIDC responsibility but use infrastructure that was initially conceived for day-ahead)

• The legal and the communication working groups of both projects will be merged as well.

• The governance changes need to be reflected in the operational agreements of the projects, and these contract adaptation are currently underway.

• The new contracts will undergo regulatory approval where necessary before they are signed by the member parties.

• Implementation of the new governance is planned in Q1 2022.
10. CRIDA

14:15-14:55

Fabrizio Carboni and Mario Pession (GME)
Paolo Fanelli (Terna)

29th April 2021
1. Overview of CRIDA: geographical scope
2. Overview of CRIDA: background

- Complementary Regional Auctions based on price coupling mechanism
  - Approved methodology by NRAs of Italy North and Greece-Italy CCR according to art. 63 of CACM
  - Compliant with art. 55 of CACM (*Pricing of Intraday capacity*) -> early implementation of the *Intraday Auctions for Pricing* (IDA)
  - Regional scope: implicit auction for capacity allocation across bidding zones (BZs) of Italy, Slovenia and Greece based on same assets and algorithm adopted in SDAC
  - Capacity allocation with reliable price signals reflecting market congestions on the intraday timeframe
  - Timing of the CRIDAs (similar to IDAs) based on the Intraday coordinated Capacity Calculation (IDCC) processes at regional level
3. Overview of CRIDA: timing, tradable hours and Offered Transmission Capacity (OC)

- **CRIDA** is composed of 3 different implicit auctions.
  - **1st CRIDA** (MI1 in Italian market):
    - **Timings**: Gate closure at 15:00 D-1 → Publication of Results at 15:30 D-1
    - ** Tradable hours**: all 24 hours D
    - **OC**: «residual» available capacity after SDAC
  - **2nd CRIDA** (MI2 in Italian market):
    - **Timings**: Gate closure at 22:00 D-1 → Publication of Results at 22:30 D
    - ** Tradable hours**: all 24 hours D
    - **OC**: available capacity after recalculation IDCC1 (starting from end of 2022)
  - **3rd CRIDA** (MI3 in Italian market):
    - **Timings**: Gate closure at 10:00 D → Publication of Results at 10:30 D
    - ** Tradable hours**: 12.00 – 24.00 (13th h - 24th h) D
    - **OC**: available capacity after recalculation IDCC2
