Accelerate the energy transition with Localflex markets

THE OLD

centralised, dispatchable, unidirectional, large-scale, fixed

THE NEW

distributed, intermittent, bi-directional, small-scale, on demand

- Development of RES
- Decentralisation
- Multiplication of actors
- Volatility
- Grid congestion

Localflex markets are complementary to existing wholesale and balancing markets.

System operators:

Localflex efficiently centralises flexibility offers where and when needed to relieve congestions on the grid

Flexibility providers:

Localflex enables a wide variety of flexibility providers to monetise their flexibility
